HENRYS

The Perfect Devilstick for Rhythmic Playing with Perfection and Passion

beat

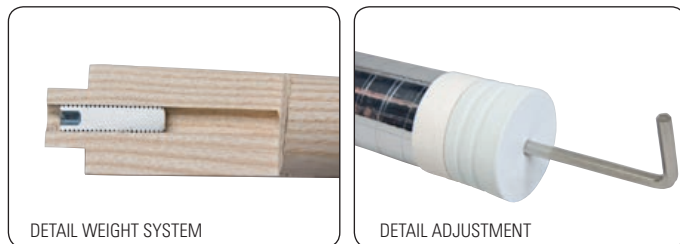

By Henrys.

For artists with highest demands on their props.

With its new weight concept and its superior quality in material and workmanship the Beat gives fresh impetus to the artistic section. Its incomparable playing characteristics make the hearts of some of the world's best devilstick players beat faster. After all, THEY gave the Beat its final touch with their feedback.

The Beat has an innovative weight system, which is worked into the ends of the devilstick, thus increasing the inertia. This system makes the Beat so much easier to play, so much more dynamic and controllable compared to conventional devilsticks.

Moreover this innovative system allows precise adjustment of the centre of gravity to the centre point of the devilstick. The point of balance lies exactly in the middle of the devilstick. If necessary, the player himself can make the adjustment with an Allen wrench. In this way the Beat has always the right balance.

Only select and first-class ash from domestic, sustainably managed forests is used for the Beat. Ash is the favoured type of wood when high dynamic strength and elasticity are required, also e.g. for archery bows. All wood pieces are weighed before processing and they are tested for precise concentricity characteristics.

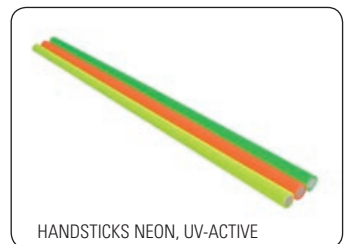

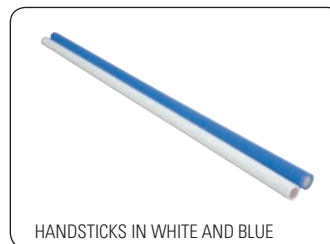

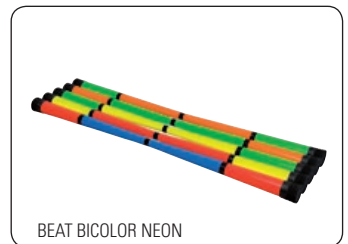

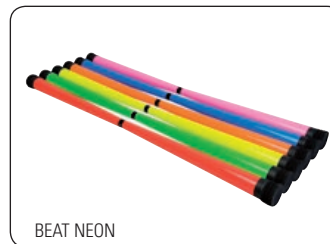

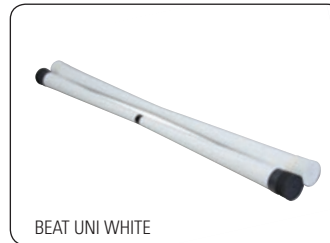

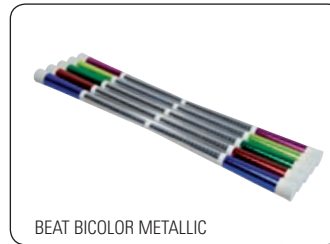

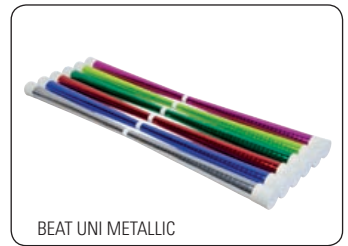

The knobs at the ends of the devilstick are firmly bonded by a special type of glue. We have intentionally not fixed the knobs with screws. This allows each player to grind in his own favoured profiles. The knobs do not only offer optimal protection: the lateral grooves allow touching the end of the stick at any time.

The Beat is available in 30 different decorations and colour variations. No matter whether UV-neon colours, metallic or glitter decors, or puristic white. There are hardly any wishes left unfulfilled.

HENRYS

Produktions- und Grosshandels GmbH · In den Kuhwiesen 10 · 76149 Karlsruhe

A transparent, UV-resistant heavy-duty film additionally protects the metallic glitter decors. Therefore players may enjoy their decor for a long time.

We are also offering an undecorated version of the Beat, for all those who want to realize their own wishes regarding decoration.

Like all our products the Beat is hand-made with greatest care and precision.

The Beat is available in the following technical specifications:

length	672 mm
outer diameter	36 mm
diameter middle	18 mm
weight	approx. 225 g

Our service for artists: We manufacture per order several individual devil sticks having exactly the same desired weight.

Made in Germany
